

Mollart Engineering (Resolven) Limited

Quality Control Inspector Vacancy – Afternoon Shift

Due to company growth and expansion, Mollart Engineering Resolven is looking for a quality inspector. This is a permanent afternoon shift-based role after completion of training. The hours are Afternoon Shift 14:00 – 12:00, Monday to Thursday, 38 hours as standard.

Job Description

To carry out quality Inspections and checks on manufactured parts and assemblies to ensure they meet company, and customer standards and specifications. You will identify any defects and record inspection results and work closely with the Production Dept to maintain consistent product quality.

Key Responsibilities:

- Conduct inspection of machined parts, weldments, and assemblies as per customer's drawing, specifications, and requirements through the use of various types of inspection equipment and CMM operation.
- Initiate and follow up of non-conformance as required.
- Verification of operator in-process checks.
- Maintain a clean work environment to eliminate potential product contamination and damage.
- Document inspection results in accordance with customers' requirements and any additional work instructions.
- Vacuum Leak Testing using jigs and fixtures.
- Work closely with production, CNC machinists, and engineers to resolve quality issues.
- Auditing of final products/modules within a cleanroom environment.

Skills and Experience:

- Ability to read engineering drawings, bill of materials, quality plans and other documents as needed is a must.
- Ability to exhibit a keen perception in all areas of quality assurance.
- Be competent in the use of all metrology inspection and test equipment and CMM operation.
- Proven track record of the highest integrity level.
- Effective communication of quality issues.
- Must be observant and have a good eye for detail.
- Basic knowledge of Excel, MSOffice, and Outlook.
- Familiar with process control tools.
